Mature Size: 3.0mH x 2.0mS/Upright growth

Preferred Location: Free flower hedging/Garden plant

Likes: Full sun or partial shade/Rich, moist soils

Dislikes: Water logged soil and temperatures below -25°C

Grown in: Ireland

Sambucus 'Black Lace' is a stunning foliage plant and extremely adaptable to the environment. It is easy to grow, can be pruned to fit in most garden situations and sets year round accents through its black foliage, the pink flower buds followed by creamy white flowers and the red and black berries. The berries are edible and can be used the same than other elderberries for making jam or wine. It is also extremely winter hardy.
